

Intelligent Medicine Radio for February 1

written by Dr. Ronald Hoffman | February 3, 2025

Part 1: Potent Immune System Support

The exorbitant cost of new drugs touted for psoriasis in direct-to-consumer ads highlights everything wrong with our medical system; When gastric bypass surgery sends blood sugar out of control; A campaign to ban ultra-processed foods from school meals may help alleviate nutritional threats to kids—but healthy eating begins at home; With winter viruses making the rounds, a remarkable supplement offers potent immune system support.

Part 2: Bright Light Therapy

What are the downsides of pacemakers? Rethinking low-protein diets for chronic kidney disease; Bright light therapy and creatine alleviate depression; Withdrawal from World Health Organization assailed—but the U.S. can't afford to abdicate to its flawed dietary recommendations; Does a positive ANA blood test necessarily mean you're destined to develop an autoimmune disease? Unprecedented levels of sedative drug abuse among young people calls attention to "Anxious Generation."
