Leyla Weighs In: Supplement recommendations for supporting healthy weight loss and optimizing metabolic efficiency

EGCG — Containing the highest-potency pure green tea extract available, EGCG enhances thermogenesis (fat-burning) and is a natural antioxidant and anti-inflammatory.

L-Carnitine — Carnitine ushers fat into the mitochondria (the "powerhouse") of cells, enhancing fat-burning.

NT Factor — Promotes metabolism, maintains the integrity of cell membranes and supports optimal mitochondrial function.

Orthomega — Essential fatty acids are depleted by the standard American diet, which contains unhealthy fats. Orthomega provides EPA and DHA, crucial to proper biochemical functioning; it has been shown to combat insulin resistance that leads to fat accumulation around the midsection.

Capsiate Natura — Enhances metabolism with the help of capsinoids. In numerous clinical studies, capsiate has been shown to increase metabolism without any side effects.

Chromemate Chromium GTF — A critical trace element which helps facilitate uptake of glucose into the cells, stabilizing blood sugar and cravings.

 ${\sf Dimpro}-{\sf A}$ dietary supplement that restores hormonal balance, which may help to reverse hormonal weight gain.

L-Glutamine — A critical amino acid in the maintenance of gut integrity with the added bonus of helping to alleviate sugar cravings.

WellBetX PGX - A proprietary soluble fiber complex and sugar blocker.

5-HTP — 5-hydroxytryptophan is a direct metabolic precursor of serotonin, a neurotransmitter responsible for mood regulation and satiety.

For more on this topic, listen to Dr. Hoffman's Clinical Focus podcasts for this week, where he discusses Weight Loss Supplements in-depth. (Part One, Part Two)

If you would like an individually tailored nutrition plan for your weight optimization goals, please feel free to make an appointment with me: (212) 779-1744.

I look forward to becoming a collaborator in your health care!
